În timpul montajului și exploatării profilelor T-Panel, pentru fiecare tip de tablă poate apărea ondularea suprafețelor netede ale tablei. Aceasta este mai vizibilă pentru tabla lucioasă. Acest lucru are legătură cu tehnologia de producție și montaj a acestor table, dilatarea termică a acestora și fenomenul de reflexie a luminii. Un fenomen natural este de asemenea zgomotul profilului în condiții de vânt. Pentru a diminua acest efect, se poate folosi o membrană cu peri, o bandă fonică, un suport structural, o membrană anticondens autoadezivă sau alte materiale.

Montajul tablelor de acoperiș necesită cunoștințe de specialitate și experiență. Aceste instrucțiuni sunt un material consultativ și nu exonerează contractorii de obligația respectării principiilor și normelor privind învelitorile de acoperișuri. Modalitățile de montaj prezentate în aceste instrucțiuni au caracter de recomandări generale. Metoda necesară de montaj poate diferi de cele indicate în instrucțiuni, în funcție de tipul acoperișului sau soluțiile regionale. Pentru a beneficia de instrucțiunile generale și indicațiile de montaj, trebuie procedat conform recomandărilor proiectantului sau trebuie să contactați departamentul nostru de asistență tehnică. Contractorii experimentați dețin soluții individuale, pe care Societatea BLACHOTRAPEZ le acceptă.
